Programming Assignment 3
Sheila Nicholson
301218964

Design choices:

- Using Maybe to be able to deal with type error failures
- Deriving read and show to simplify converting `expr->String` and `String->expr`
- Let in has recursive support since the type of `expr 1` is checked using the updated typing environment `g'`

Features:

- Helper functions: `typingArith`, `typingEq`
- Typing function – recursively determines types
- `readExpr` parses a string in an `expr`
- `typeCheck` formats the result of type check
- `main` handles file I/O
